Alupro Construction – spectacular architectural solutions

Finnish Alupro has more than 50 years of know-how and experience in developing and building architectural solutions. Years of co-operation with the industry's leading architects, construction firms and facade specialists have enabled Alupro to develop its own products and services with customers' wishes and needs in mind. Examples include the form-lockable AluClík facade and ceiling louvers and the recently launched AluLimi system for creating visually striking and totally unique glass facades.

Alupro's in-house design engineers in Tuusula Finland, turn architects' visions into hard-wearing interiors and exteriors for any building. Having our own production facility and powder coating plant ensures a seamless production chain and high-quality products from design to assembly.

Our core values are customer orientation and high-quality products and services – now and in the future. We have ISO 9001 quality certification, ISO 14001 environmental certification, OHSAS 18001 occupational health and safety certification, and ISO 3834-2 welding certification. Our products also carry structural steel CE marking to show compliance with the EN 1090-1 standard in EXC-1 and EXC-2 class.

Alupro is a pioneer in its field, a reliable partner for you in your finest architectural visions. Our competence is at your disposal!

“Strikingly
 unique
 facade
 solutions”

PS-P Louvers

Made of 100 % recyclable
 non-ferrous metals

Weatherproof in
 all conditions

Available in all RAL colors

Energy-efficient

Long-lasting

Requires no maintenance

Supplied with UV protection:
 Absorbs 90% of the sun's rays

Alupro's customizable PS-P Louvers are ideal for hiding technical systems and giving a visually harmonious and striking look to many different kinds of facades. PS-P Louvers are custom-made from aluminum, brass, copper or acid-proof steel to the architect's desired shape and size.

They can be painted any color at Alupro's powder coating plant. The coating process also gives the louvers a UV-resistant finish, which makes them hard-wearing and weatherproof. Alupro's UV-protected PS-P Louvers provide a high degree of privacy and absorb as much as 90% of the sun's radiant energy.

Material options are limitless, allowing you to find the ideal look for your vision. Only your vision is the limit! The material is 100% recyclable, requires no maintenance apart from cleaning, and can be used in any weather conditions. PS-P Louvers are easy to assemble, they are lightweight yet strong. These properties make Alupro's PS-P Louvers an attractive, durable and cost-effective solution for all kinds of buildings.

“A symphony
of shapes
and colors”

AluClík Facade Louvers

Made of 100 % recyclable
non-ferrous metals

Weatherproof in
all conditions

Available in all RAL colors

Energy-efficient

Long-lasting

Requires no maintenance

Supplied with UV protection:
Absorbs 90% of the sun's rays

Easy to assemble

Alupro's cost-effective and attractive AluClík Facade Louvers are a result of the know-how of a team of ten design engineers combined with 15 years of experience. With a choice of more than 20 different slat designs and stepless slat spacing, AluClík turns architects' visions into stylish facades.

Combinations of close to 20 different profiles and numerous color options create spectacular solutions, finished to the finest detail. Powder coating allows AluClík Facade Louvers to be painted any color, and a UV-resistant finish guarantees durability in all weather conditions. If necessary the louvers are also given an anti-graffiti coat that makes them easy to clean.

Tested at Tampere University of Technology in Finland, the lightweight yet strong, form-lockable louvers are easy to work with and quick to assemble on site. All the profiles and frame options are fully compatible with each other. Some of the AluClík Facade Louvers can also be used on curved facades, which makes them an excellent solution for hiding technical systems. The interlocking design saves both time and money during assembly.

“New and innovative possibilities for facade architecture”

AluLimi Facade System

Weatherproof in all conditions

Energy-efficient

Long-lasting

Requires no maintenance

Endless visual customization possibilities

Alupro invests heavily in cooperation with architects in order to develop new and innovative facade solutions. A good example of this is Alupro's new AluLimi Facade System, which brings a whole new dimension to unique facade design.

The double facade system combines glass and aluminum seamlessly to inject style and energy efficiency into different types of facades. Even architects' most outlandish visions can be realized with the help of surface finishing options, such as printed images or colors on the glass. The eye-catching AluLimi glass louvers can also be replaced by other surface materials, such as copper, steel or wood, according to the architect's wishes. The AluLimi Facade System can also be combined with Alupro's other facade products, such as PS-P Facade Louvers and AluClik Louvers.
